

SOURCE PROTECTION AUTHORITY ON-LINE VIDEO CONFERENCE AND IN-PERSON MEETING

Ball's Falls Centre for Conservation Glen Elgin Room 3292 Sixth Avenue, Jordan, ON

> Friday, April 22, 2022 9:30 a.m.

AGENDA

CALL TO ORDER

The Niagara Peninsula watershed is situated within the traditional territory of the Haudenosaunee, Attiwonderonk (Neutral), and the Anishinaabeg, including the Mississaugas of the Credit—many of whom continue to live and work here today. This territory is covered by the Upper Canada Treaties (No. 3, 4, and 381) and is within the land protected by the Dish with One Spoon Wampum agreement. Today, the watershed is home to many First Nations, Métis, and Inuit peoples. Through the 2021-2031 Strategic Plan, we re-confirm our commitment to shared stewardship of natural resources and deep appreciation of Indigenous culture and history in the watershed.

1. APPROVAL OF AGENDA

- 10. CLOSED SESSION (IF REQUIRED)
- 11. ADJOURNMENT

SOURCE PROTECTION AUTHORITY ONLINE TELECONFERENCE MEETING MINUTES Friday, April 16, 2021 9:30 A.M.

NOTE: The archived recorded meeting is available on the NPCA website. The recorded video of the Source Protection Authority meeting is not considered the official record of that meeting. The official record of the Source Protection Authority meeting shall consist solely of the Minutes approved by the Source Protection Authority Board.

MEMBERS PRESENT:

- B. Johnson (Chair)
- S. Beattie
- R. Brady
- B. Clark
- D. Coon-Petersen
- D. Cridland
- L. Feor
- R. Foster
- J. Hellinga
- D. Huson
- J. Ingrao
- K. Kawall
- B. Mackenzie
- J. Metcalfe
- W. Rapley
- E. Smith
- B. Steele
- M. Woodhouse
- B. Wright
- MEMBERS ABSENT: R. Shirton
- STAFF PRESENT:
- C. Sharma, C.A.O. / Secretary Treasurer G. Bivol, Clerk
- J. BIVOI, CIEIK
- R. Bisson, Manager, Communications and Public Relations
- A. Christie, Director, Operations and Strategic Initiatives
- J. Culp, Supervisor, Permits and Compliance
- D. Deluce, Senior Manager, Planning and Regulations
- M. Ferrusi, Manager, Human Resources
- L. Gagnon, Director, Corporate Services
- N. Green, Project Manager, Strategic Plan
- S. Mastroianni, Manager, Planning and Development
- S. Miller, Senior Manager, Water Resources
- A. Powell, Manager, Conservation Area Services

T. Proks, Source Water Protection Co-ordinatorG. Shaule, Administrative AssistantG. Verkade, Senior Manager, Integrated Watershed Planning / Information Management

The Chair called the meeting to order at 9:33 a.m..

1. APPROVAL OF AGENDA

Resolution No. SPA-12-2021 Moved by Board Member Beattie Seconded by Board Member Brady

THAT the agenda be hereby **APPROVED** as presented.

CARRIED

2. DECLARATIONS OF CONFLICT OF INTEREST

None declared.

3. APPROVAL OF MINUTES

a) <u>Approval of the Minutes of the Source Protection Authority meeting dated December 17, 2020</u>

Resolution No. SPA-13-2021 Moved by Board Member Clark Seconded by Board Member Cridland

THAT the minutes of the Source Protection Authority Board meeting dated December 17, 2020 **BE ADOPTED**.

CARRIED

4. CORRESPONDENCE

None.

5. DISCUSSION ITEMS

a) <u>Report No. SPA-01-21 RE: 2020 Drinking Water Source Protection Annual Progress</u> <u>Reporting</u> - Thomas Proks, Source Water Protection Co-ordinator spoke to the report.

Resolution No. SPA-14-2021 Moved by Board Member Coon-Petersen Seconded by Board Member Feor

 THAT the Source Protection Authority for the Niagara Peninsula Source Protection Area (NPSPA) RECEIVE the following draft final report documents approved by the Source Protection Committee on March 23rd 2021 :

Page 2

- a. NPSPA 2020 Drinking Water Source Protection (DWSP) Annual Progress Report;
- This report concludes that the Source Protection Plan is progressing well and that all the policies are implemented.
- This report is designed for the public and is intended to be posted on the NPSPA website.
- b. NPSPA 2020 Policy Implementation Status Report;
- This report displays each policy within the Source Protection Plan and its status of implementation.
- c. NPSPA 2020 Policy Implementation Status Summary; and
- This report displays a summary of total policy implementation status in the NPSPA.
- d. NPSPA 2020 Supplemental Form.
- This report displays all the detailed information required by the Ministry of the Environment, Conservation and Parks as it pertains to 2020 Drinking Water Source Protection annual progress reporting and Source Protection Plan implementation.
- 2. **THAT** the Source Protection Authority **APPROVE** that the aforementioned documents be submitted to the Ministry of the Environment, Conservation and Parks to meet the legislated reporting requirements; and
- 3. **AND FURTHER THAT** the NPSPA 2020 Drinking Water Source Protection Annual Progress Report be **POSTED** on the Niagara Peninsula Source Protection Area website.

CARRIED

6. NEW BUSINESS

There was no new business.

7. ADJOURNMENT

With no further business, the Source Protection Authority adopted the following motion.

Resolution No. SPA-15-2021 Moved by Member Foster Seconded by Member Feor

THAT the meeting **BE ADJOURNED** at 9:44 a.m.

CARRIED

Niagara Peninsula Source Protection Area Overview and Updates

Niagara Peninsula Source Protection Authority Thomas Proks, P.Geo. April 22, 2022

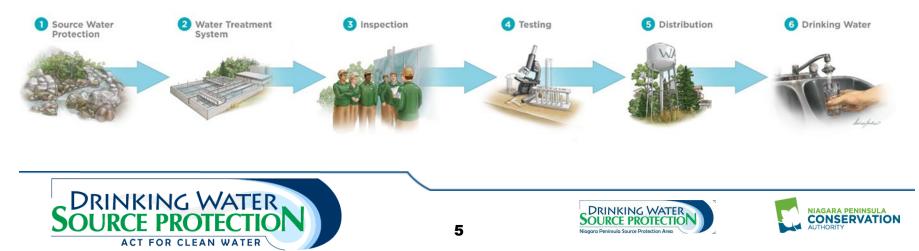

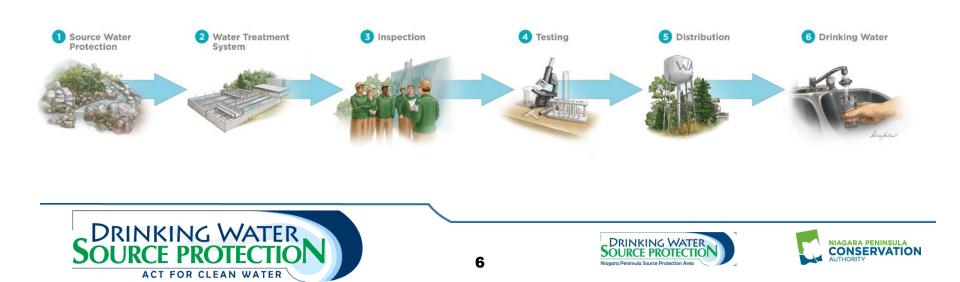

Source Protection Program Context

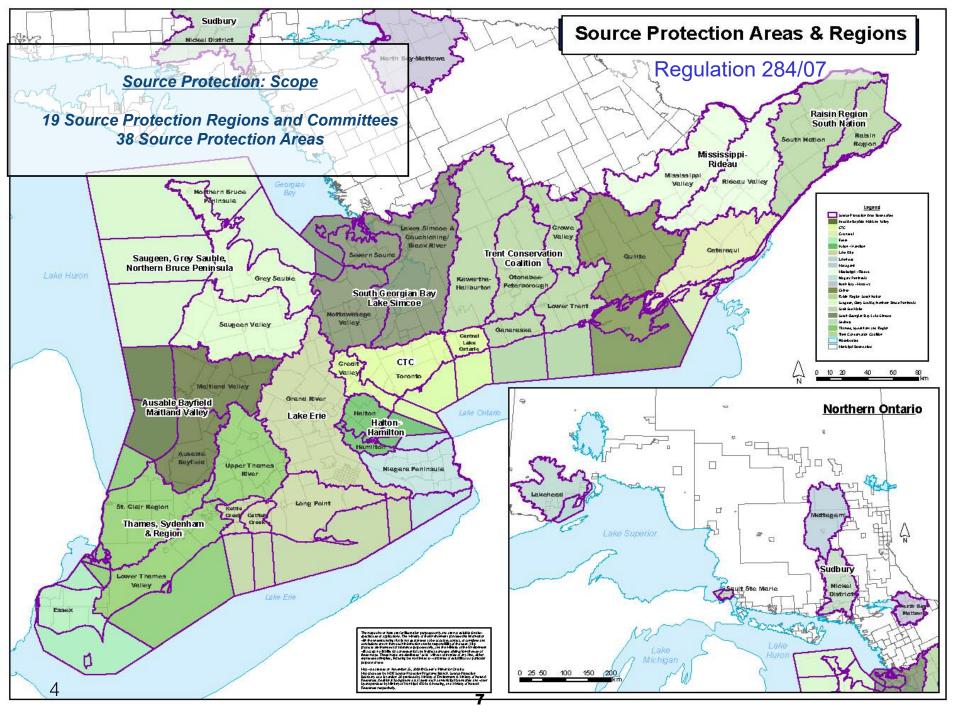

- After the Walkerton tragedy in May 2000, Justice Dennis O'Connor was commissioned to lead an inquiry into the contamination of the Walkerton water supply and more broadly, the safety of Ontario's drinking water.
- Clean Water Act, 2006 (CWA) came into force July 3rd, 2007.
- First Principle concept of prevention in the safeguarding of our drinking water for our communities and our health.

Source Protection Program Context

- The CWA established 38 source protection areas within the Province generally based on Conservation Authority boundaries under the Conservation Authorities Act, 1990.
- Source protection plans are now in place for municipal residential drinking water systems within the 38 source protection areas, representing approximately <u>90% of the</u> <u>population</u> within those source protection areas.

8

ACT FOR CLEAN WATER

Niagara Peninsula Source Protection Area

Source Protection Process

Assessment Report (November 2013)

- Vulnerable zones and vulnerability scores delineated
- Significant threats identified

Source Protection Plan (legal effect October 2014)

- Policies to address significant threats
- Implementer timelines and responsibilities

Implementation of Source Protection Plan

- By municipalities, provincial ministries, etc.
- Annual monitoring reporting by SPA

Updates to Assessment Report and Source Protection Plan (2018-Present)

Recent Changes

- CA Act amendments solidify Source Water Protection as a core mandate of the CA
- Provincial Funding for Source Water Protection continues with the first ever funding application for two year term
- Phase II Director's Technical Rule Amendments released in late 2021
- Early 2022 release of Best Practices guidance for Source Protection for other drinking water systems

Upcoming Section 36 Update

- May 2021 receipt of Section 36 deadline extension
 - previous deadline was March 2022; new deadline is to submit within 6 months of completing updates
- Source Water Protection Technical Work in process for three (3) Niagara Region Water Treatment Plants
 - Welland
 - Rosehill (Fort Erie)
 - Niagara Falls
- Can accommodate Phase II DTR changes as well

Welland

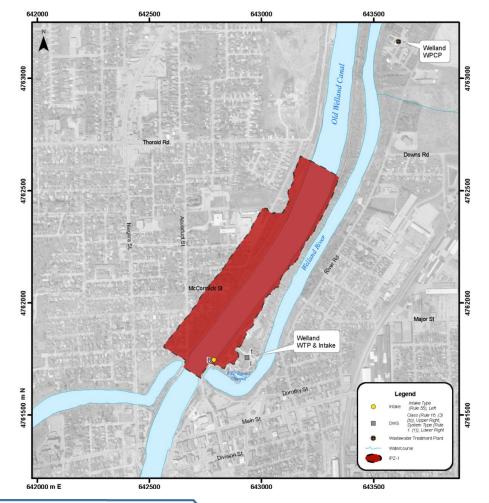

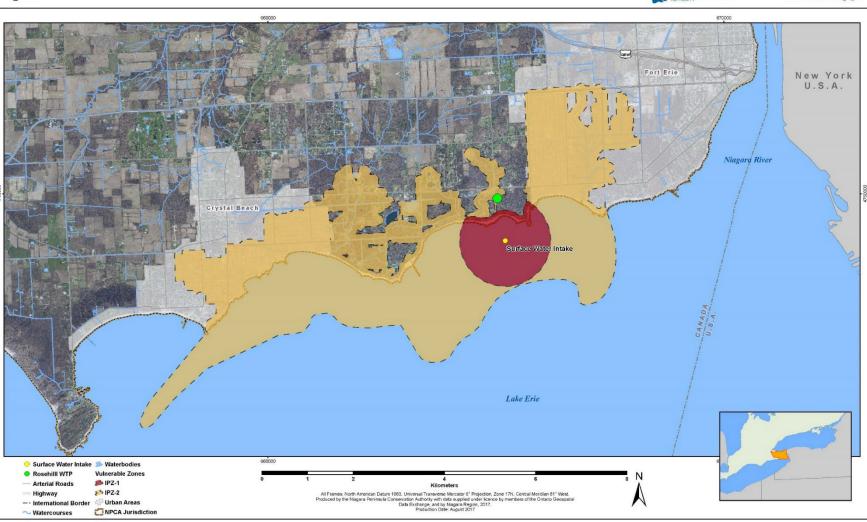

Figure 5: Rosehill IPZ-1/ IPZ-2

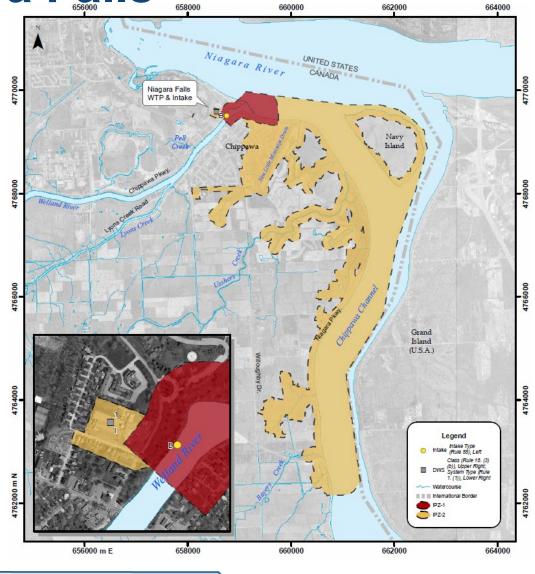

CONSERVATION COntario

13

Niagara Falls

14

Moving Forward

- Continue CWA Annual Progress Reporting
- Accommodate technical work and additional updates to Assessment Report and Source Protection Plan
- Conduct Pre-consultation with affected stakeholders
- Finalize Assessment Report and Source Protection Plan updates
- Public Consultation
- SPA review and approval before final submission

Drinking Water Source Protection Primer: For Municipal Councillors

Your community relies on safe, sustainable drinking water. Protecting the water at its source is an important first step in the drinking water safety net.

Ontario has a comprehensive Drinking Water Source Protection Program to ensure sources of municipal drinking water are protected now and into the future. Under this program, local source protection plans developed under the *Clean Water Act, 2006*, are in place. These plans contain policies that protect municipal drinking water sources (water found in lakes, rivers and groundwater aquifers) from contamination and overuse.

Meet your statutory standard of care responsibilities

Source protection plans require municipalities to implement policies to protect the source water for their drinking water systems. The Safe Drinking Water Act, 2002, includes a statutory standard of care (section 19) for individuals with oversight responsibilities for municipal drinking water systems, including municipal councillors.

This standard ensures that you are practicing due diligence to protect public health when making decisions that could affect drinking water. This includes a consideration of the source water characteristics as well as the risks posed to it.

Learn more at: <u>ontario.ca/page/taking-care-your-</u> drinking-water-guide-members-municipal-councils

Ensure source protection planning is in place

New regulation 205/18 has been established under the Safe Drinking Water Act, 2002, to ensure that source protection planning is in place for new and changing municipal systems, before treated drinking water is provided to the public. The

Drinking Water Source Protection Primer: For Municipal Councillors

Your community relies on safe, sustainable drinking water. Protecting the water at its source is an important first step in the drinking water safety net.

Ontario has a comprehensive Drinking Water Source Protection Program to ensure sources of municipal drinking water are protected now and into the future. Under this program, local source protection plans developed under the *Clean Water Act, 2006,* are in place. These plans contain policies that protect municipal drinking water sources (water found in lakes, rivers and groundwater aquifers) from contamination and overuse.

Meet your statutory standard of care responsibilities

Source protection plans require municipalities to implement policies to protect the source water for their drinking water systems. The *Safe Drinking Water Act, 2002,* includes a statutory standard of care (section 19) for individuals with oversight responsibilities for municipal drinking water systems, including municipal councillors.

This standard ensures that you are practicing due diligence to protect public health when making decisions that could affect drinking water. This includes a consideration of the source water characteristics as well as the risks posed to it.

Learn more at: <u>ontario.ca/page/taking-care-your-</u> <u>drinking-water-guide-members-municipal-councils</u>.

Ensure source protection planning is in place

New regulation 205/18 has been established under the *Safe Drinking Water Act, 2002,* to ensure that source protection planning is in place for new and changing municipal systems, before treated drinking water is provided to the public. The

regulation came into effect on July 1, 2018. Municipal residential drinking water system owners are now responsible for ensuring that vulnerable areas are delineated and vulnerability scores are identified before they apply for a drinking water works permit. Source protection plans must also be amended and approved prior to the treated water being supplied to the public.

Notify your local conservation authority immediately, when planning changes to your drinking water systems, or planning for a new well/intake or a new system.

Provincial Policy Statement

Municipalities and other planning authorities must follow the Provincial Policy Statement. Section 2.2.1 mandates planning authorities to protect, improve or restore the quality and quantity of water. This includes protecting vulnerable areas associated with drinking water sources.

Be informed

- Your constituents may come to you with questions about the source of their drinking water supply. Find out how drinking water source protection benefits your region, and the cost of the protection. Know how many municipal wells/surface water intakes there are, where they are located, and who they serve in your municipality. Determine these with help from your municipal staff and local conservation authority.
- Municipalities are responsible for implementing more than half of the policies found in source protection plans. Many of these policies are legally binding.

Review the source protection plan for your area to find out what policies are to be implemented within your municipality and what actions are being taken to protect drinking water vulnerable areas.

- Understand how source protection plan policies can impact building requirements. Development applications and planning or building permits may be flagged at a municipality for land use planning policies. These applications or permits often need to be reviewed by the local risk management official (RMO) before they can be submitted to the municipality. Proposed activities may require a risk management plan, or in some cases are prohibited.
- When a **risk management plan** is needed, a risk management official works with the landowners/renters to develop a plan that contains measures to protect drinking water sources. A risk management plan is only required when a property is in a vulnerable area and the activity being undertaken poses a significant level risk to drinking water sources.
- Sewage systems identified under the *Clean Water Act* as causing significant level risks to drinking water sources, are subject to mandatory inspections through the *Building Code Act, 1992*.
- The Drinking Water Source Protection Program does not include individual private wells.
 A private well owner needs to regularly sample their water to test its quality, and properly maintain their well to protect water sources.

For more on source protection planning, visit protectingwatermatters.ca.

What's a vulnerable area?

Drinking water source protection is based on science. Local scientific data was used to create maps that show drinking water vulnerable areas. In these areas, we need to pay attention to activities causing contamination and overuse of our municipal drinking water sources.

To find out if a property is located in a drinking water vulnerable area, search the Source Protection Information Atlas at <u>ontario.ca/page/</u> <u>source-protection</u>.

There are four types of vulnerable areas:

- 1. Wellhead protection areas (WHPAs) are areas around municipal wells where the groundwater is travelling toward that well when the well is being pumped. These areas should be protected from risks to the quality and quantity of the drinking water source.
- 2. Intake protection zones (IPZs) are areas of land and water around surface water intakes that should be protected from risks to the quality and quantity of the drinking water source.
- 3. Significant groundwater recharge areas (SGRAs) are areas where a relatively high percentage of precipitation seeps into the ground to help maintain the water level in an aquifer that supplies a community or private residence with drinking water.
- 4. Highly vulnerable aquifers (HVAs) are areas that are particularly susceptible to contamination based on factors such as the aquifer depth underground, the soil types, soil permeability and other characteristics of the surrounding soil or rock.

If a water quality issue is identified by source protection committees under the *Clean Water Act*, issue contributing areas (ICAs) can be delineated within the vulnerable areas. Examples of issues identified in Ontario include nitrate and sodium. Mandatory policies apply within issue contributing areas in order to ensure that the source water quality is protected or improved.

Know the threats to drinking water sources

The *Clean Water Act* identifies activities that could pose a threat to drinking water sources under certain circumstances. These threat activities may be significant, moderate or low level risks. Identified threats include:

- Application, handling and storage of agricultural source material (such as manure), non-agricultural source material (such as biosolids), commercial fertilizer, and pesticides.
- Handling and storage of fuel, dense non-aqueous phase liquids (DNAPLs*), and organic solvents.
- Management of aircraft de-icing chemical runoff.
- Land used for livestock grazing or pasturing, outdoor confinement areas, and farm-animal yards.
- Application, handling and storage of road salt, and storage of snow.
- The establishment, operation and maintenance of systems that collect, store, transmit, treat or dispose of sewage (such as septic systems and sewage treatment plants, stormwater management facilities).
- The establishment, operation and maintenance of waste disposal sites (such as landfills).
- Activities that take water from a water body without returning the water to the same water body.
- An activity that reduces the recharge of an aquifer.
- The establishment and operation of a liquid hydrocarbon pipeline (added in April 2018, through an amendment to the *Clean Water Act*).

*DNAPLs, or dense non-aqueous phase liquids, are a particularly hazardous group of substances that are heavier than water and are difficult to remove once they contaminate a water source.

.....

Have you seen this Drinking Water Protection Zone sign?

These signs are appearing across Ontario to raise awareness about the vulnerability of our municipal drinking water sources. Governments at the local and provincial level are placing signs along roadways where a pollution spill could have a negative impact on our drinking water sources.

REPORT TO:	Source Protection Authority	
SUBJECT:	2021 Drinking Water Source Protection Annual Progress Reporting	
REPORT NO:	SPA-01-22	
DATE:	April 22, 2022	

RECOMMENDATION:

- 1. **THAT** Report No. SPA-01-22: 2021 Drinking Water Source Protection Annual Progress Reporting **BE RECEIVED**.
- THAT the Source Protection Authority for the Niagara Peninsula Source Protection Area (NPSPA) RECEIVE the following draft final report documents approved by the Source Protection Committee on March 29th, 2022:
 - a. NPSPA 2021 Drinking Water Source Protection (DWSP) Annual Progress Report;
 - This report concludes that the Source Protection Plan is progressing well and that all the policies are implemented.
 - This report is designed for the public and is intended to be posted on the NPSPA website.
 - b. NPSPA 2021 Policy Implementation Status Report;
 - This report displays each policy within the Source Protection Plan and its status of implementation.
 - c. NPSPA 2021 Policy Implementation Status Summary; and
 - This report displays a summary of total policy implementation status in the NPSPA.
 - d. NPSPA 2021 Supplemental Form.
 - This report displays all the detailed information required by the Ministry of the Environment, Conservation and Parks as it pertains to 2021 Drinking Water Source Protection annual progress reporting and Source Protection Plan implementation.
- 3. **THAT** the Source Protection Authority **APPROVE** that the aforementioned documents be submitted to the Ministry of the Environment, Conservation and Parks to meet the legislated reporting requirements; and
- 4. **AND FURTHER THAT** the NPSPA 2021 Drinking Water Source Protection Annual Progress Report be **POSTED** on the Niagara Peninsula Source Protection Area website.

PURPOSE:

The 2021 Drinking Water Source Protection Annual Report documents are prepared using the Electronic Annual Reporting tool provided by the Ministry of Environment, Conservation and Parks. These documents are required under the Clean Water Act to summarize progress made in implementing the Source Protection Plan for 2021. These documents, once approved by both the Source Protection Committee and the Source Protection Authority, are then required to be submitted to the Ministry of the Environment, Conservation and Parks by May 1, 2022.

BACKGROUND:

The Clean Water Act requires that implementing bodies, such as municipalities and the Ministry of the Environment, Conservation and Parks, report annually on the implementation of policies within the Source Protection Plan. Implementers provided this information to the Source Protection Authority staff by a combination of methods including email and phone.

The goal of annual reporting is to track and advise the public that the implementation of Source Protection Plans and their respective policies are protecting Ontario's municipal drinking water sources.

The requirement for annual progress reporting is established in the Clean Water Act. The Source Protection Authority is required to report using the Electronic Annual Reporting tool provided by the Ministry of the Environment, Conservation and Parks. Through the Electronic Annual Reporting tool, staff of the Source Protection Authority answer questions related to the implementation of the Source Protection Plan policies and then generate the following documents:

- I. NPSPA 2021 Drinking Water Source Protection Annual Progress Report a report which is designed for the public and is to be posted on the Niagara Peninsula Source Protection Area website. It summarizes the progress made with respect to the implementation of the Source Protection Plan;
- II. NPSPA 2021 Policy Implementation Status Report a report which displays the details of each policy within the Source Protection Plan and its status of implementation;
- III. NPSPA 2021 Policy Implementation Status Summary a report which displays a summary of total policy implementation within the Niagara Peninsula Source Protection Area;
- IV. NPSPA 2021 Supplemental Form a report which contains all the detailed information required by the Ministry of the Environment, Conservation and Parks as it pertains to 2021 Drinking Water Source Protection Annual Progress Reporting.

The completed reports are due to the Ministry of the Environment, Conservation and Parks by May 1, 2022, after which the NPSPA 2021 Annual Progress Report is to be made available to the public.

SUMMARY:

In summary, the 2021 Drinking Water Source Protection Annual Progress Reporting for the Niagara Peninsula Source Protection Area has progressed well. All the policies continue to be implemented, and all significant drinking water threats are addressed. For reference, the NPSPA 2021 Policy Implementation Status Report provides the rationale behind how each policy within the Source Protection Plan is being implemented.

These reports were presented to the Source Protection Committee for review at their recent March 29, 2022 teleconference meeting. The Source Protection Committee received and approved the information in these documents. Their comments were incorporated into the attached draft final reports. It is the Source Protection Committee's opinion that based on the information provided, all of the significant drinking water threats have been addressed and all of the policies are implemented.

RELATED REPORTS AND APPENDICES:

Source Protection Annual Progress Report

I. Introduction

This annual progress report outlines the progress made in implementing our source protection plan for the Niagara Peninsula Source Protection Area, as required by the Clean Water Act and regulations.

The Niagara Peninsula Source Protection Plan was completed and approved by the province in December 2013. The Niagara Peninsula Source Protection Plan came into effect October 2014. The Plan is entirely implemented. The Source Protection Committee is now focused on updating and improving the Source Protection Plan.

Page 1 of 10

II. A message from your local Source Protection Committee

P : Progressing Well/On Target – The majority of the source protection plan policies have been implemented and/or are progressing.

S : Satisfactory – Some of the source protection plan policies have been implemented and/or are progressing.

L : Limited progress – A few of source protection plan policies have been implemented and/or are progressing.

The Source Protection Committee states that based on the information provided that all of the threats have been addressed and all of the policies are implemented.

III. Our Watershed

To learn more, please read our assessment report(s) and source protection plan(s)

The Niagara Peninsula Source Protection Area overlies the same jurisdiction as the Niagara Peninsula Conservation Authority. With an area of 2,430 square kilometers and over 450,000 residents, it is comprised of three major drainage areas; Lake Ontario, Lake Erie, and Niagara River (including Welland River) drainage areas. NPCA contains over 180 watersheds within these drainage areas, and 117 kilometers of Great Lakes shoreline. NPCA is marked by several prominent physiographic features that have had a major effect on development in the area. These features include the Niagara Escarpment which runs eastwest across the peninsula, the relatively flat Haldimand Clay Plain which dominates the central portion of the watershed, the Iroquois Shore Sand Plain along Lake Ontario, the Fonthill Kame-Delta Complex which contains the highest point in the peninsula, and the Onondaga Escarpment which runs east-west across the peninsula just north of the Lake Erie shoreline and is of relatively low topographical relief.

The soils in the large central portion of the peninsula are dominated by clays, silty clays, and silty clay loams, characteristic of the Haldimand Clay Plain. Sands and sandy loams are found extensively along the Lake Ontario shoreline. Wetlands include bogs, fens, swamps, and marshes and encompassing almost 10% of the watershed.

Land uses can have a significant impact on the water quality and quantity. Approximately 64% is agricultural, and about 21% is rural wooded or natural. The remaining 15% is considered urban. The main urban centres include St. Catharines, Niagara Falls, and Welland. Urban growth is expected to be greatest along the Welland Canal corridor particularly in the southern portion of the peninsula.

There are six municipal water treatment plants with surface water intakes which supply over 80% of the population. There are no municipal wells. The six water treatment plants that supply municipal drinking water to residents are: Welland, DeCew Falls, Port Colborne, Niagara Falls, Grimsby and Rosehill (Fort Erie). Only Grimsby is on Lake Ontario, the remainder are on Lake Erie or a connecting channel (Welland Canal or Niagara River).

Vulnerable areas known as Intake Protection Zones (IPZs) were delineated around each municipal water treatment plant intake. The source protection program focused on drinking water threats within these IPZs. Existing and potential future threats within these IPZs were ranked and significant threats identified for policy action under the Source Protection Plan. The Source Protection Committee chose also to include transportation, storage and handling of diesel and gasoline along the Welland Canal as significant drinking water threats requiring addressing under the Source Protection Plan.

The Source Protection Plan contains policies to address significant drinking water threats for four water treatment plants, Welland, DeCew Falls, Port Colborne and Niagara Falls. No significant drinking water threats were determined for Grimsby or Rosehill (Fort Erie).

Page 3 of 10

IV. At a Glance: Progress on Source Protection Plan Implementation

1. Source Protection Plan Policies

P : Progressing Well/On Target

All of the policies (100%) that address significant drinking water threats have been implemented in accordance with the time lines set out in our source protection plan.

2. Municipal Progress: Addressing Risks on the Ground

There are a total of three (3) lower tier municipalities and one (1) upper-tier municipality in the source protection area that have vulnerable areas where significant drinking water threats apply. All three (3) of the lower tier municipalities (City of Thorold, City of Port Colborne, and City of Niagara Falls) have completed their Official Plan and Zoning By-law conformity exercises. The upper-tier municipality (Regional Municipality of Niagara) has also updated their Official Plan conformity exercise, however, the upper-tier municipality has no Zoning By-laws.

3. Septic Inspections

Not applicable to our source protection area.

4. Risk Management Plans

P: - Progressing Well/On Target

Since 2016, the Risk Management Official was able to dismiss 9 of the 24 potentially significant drinking water threats in the vicinity of the DeCew Falls IPZs identified in the Assessment Report. The remaining 15 significant drinking water threats are being managed under the required risk management plans.

Page 5 of 10

5. Provincial Progress: Addressing Risks on the Ground

Several Ministries in Ontario are reviewing applications for new or amended and previously issued provincial approvals (e.g., Environmental Compliance Approvals issued under the Environmental Protection Act) where they have been identified as a tool in our plan to address activities that pose a significant risk to source water. The provincial approvals are either being issued, denied, amended, or revoked, where necessary to conform with plan policies in Niagara. The original policies written in Niagara provided a timeline of 3 years to complete the review and make any necessary changes to previously issued approvals. Any new or amended provincial approvals need to adhere to the Source Protection Plan policies since it took effect in October 2014. 100% of previously issued provincial approvals in the Niagara Peninsula Source Protection Area have been reviewed. In 2021, there we no new prescribed instruments which needed review.

6. Source Protection Awareness and Change in Behaviour

Twenty-three (23) drinking water protection zone signs have been installed in our source protection area along municipal and regional roads that are in close proximity to intake protection zones. Community engagement and outreach continue to have a positive impact in our source protection region through programs like Yellow Fish Road[™] and the Children's Water Festival.

Other positive impacts include the consideration that is given to vulnerable areas within the Niagara Peninsula Source Protection Area including Intake Protection Zones and Highly Vulnerable Aquifers.

Page 6 of 10

7. Source Protection Plan Policies: Summary of Delays

Not applicable to our source protection area.

Page 7 of 10

8. Source Water Quality: Monitoring and Actions

Not applicable.

Page 8 of 10

9. Science-based Assessment Reports: Work Plans

No work plans were required to be implemented for our assessment report.

10. More from the Watershed

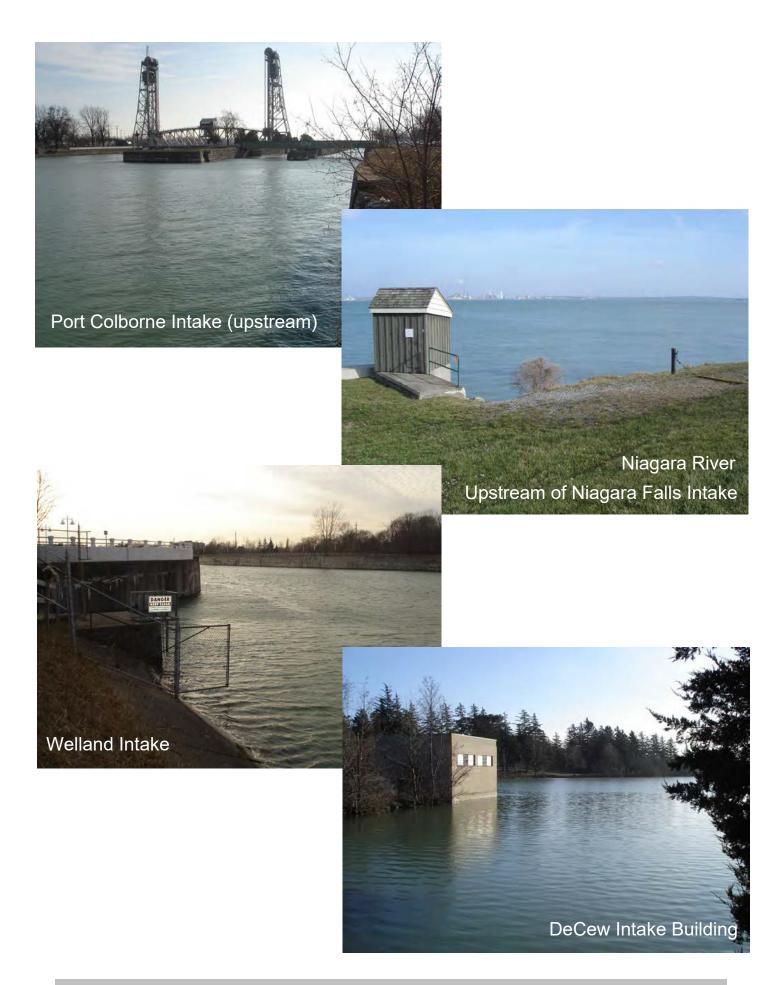

Future 2022 source water protection activities include:

-Yellow Fish Road education and outreach within the City of Niagara Falls and the City of Port Colborne and at the Niagara Children's Water Festival

-Implementation of the work plan to update the Source Protection Plan to address: (i) required municipal updates and (ii) improving municipal supply protection

- Upcoming changes to municipal drinking water intakes and infrastructure projects near vulnerable areas.

Report Id	Completed	Question	
281	True	Where transport pathway notices were received, indicate the action(s) taken by the source protection region/area in response to receiving these notices:	
Response			Answer
Provided in	formation to m	unicipalities about changes in vulnerability	No
Provided no	otice to Source	Protection Committee for information	No
Situation co	ontinues to be r	nonitored	No
Comment:	N/A		

Report Id	Completed	Question	
300	True	[OPTIONAL]: If and where there are successful examples for each of the following initiatives in the source protection region/area (including from local municipalities, residents and businesses) that occurred in this reporting period that the authority wishes to highlight, then please indicate in the Comments field below. In your comments, please include details for each of the selected topics. Please limit the descriptions provided (e.g., one example for each topic or more could be included when the source protection authority feels they are exceptional/quite successful).	
Response			Answer
Education a etc.)	and Outreach (i	in description include details, if available, on type and percentage of target population reached, outcome(s) achieved,	Yes
	(in description i	nclude details, if available, on outcome(s) achieved, how widely available was the incentive, etc.)	Yes
Stewardshi	p Programs		No
Best Manag	gement Practic	es	No
Pilot Progra	ams		No
Research			Yes
		salt management, municipal by-laws, legislative or regulatory amendments, mapping, review of fuel codes, new airport manage runoff of chemicals from de-icing of aircraft, instrumentation, etc.)	No
Climate Ch	ange (e.g., dat	a collection)	Yes
Spill prever	ntion/spill contir	ngency/emergency response plan updates	Yes
Transport p	oathways		Yes
Water quar	ntity		No
Great Lake	s		Yes
Other polici	ies (i.e., strateg	jic action, etc.)	No

Comment: Several education and outreach initiatives continued throughout 2021 with the direct or indirect goal of source protection awareness. 2021 saw a continued unusual scenario with the global pandemic, however, new ways to provide education and outreach opportunities emerged.

As an example, this year the Children's Water Festival was held virtually, once again, where children participated in online water conservation and protection activities. The event was well received and well attended with the online activities that deal with water protection being the most popular (i.e., Yellow Fish Road).

Other opportunities for in-person engagement was severely limited in 2021 due to the pandemic. Local municipalities education and outreach was diminished as resources were allocated accordingly to deal with pandemic issues.

Incentive programs at local municipalities and the conservation authority continued in 2021 (i.e., disconnecting storm drains from local sewers, and the groundwater well decommissioning program).

Report Id	Completed	Question				
305	True	Complete the table below with the count data for each significant drinking water threat activity/local threat being engaged in (i.e., enumerated as 'existing' significant threats) at the time of source protection plan of amendments that include new / changing protection zones. Please use the best available information reports from Risk Management Officials, and other implementing bodies to provide the counts below. For count data from the previous reporting year have been copied over, but please be sure to review, edit, a for accuracy in the table below. *NOTE: SPAs are strongly encouraged to refer to the Guidance docume details and instructions on completing this table.	approval /desktop e or conveni and confirr	or approva exercises, ence, the n the count

Report Id	Completed	Question	Category
340	True	What positive outcomes (e.g., less water consumption, changes in behaviour, reduction in phosphorus and nitrogen concentrations, less chloride from road salt, reduction in algal blooms, human health protected, etc.), if any, have potentially resulted from the implementation of source protection plan policies? Please describe the outcomes below.	Source protection outcomes
Answer:	awarei	f the main positive outcomes from the implementation of source protection plan policies comes in the form of heigh ness of the need for integration of source water protection into activities such as spill response exercises, e.g. local ments, St. Lawrence Seaway Management Corporation, Enbridge, Niagara Region.	
	recrea areas	t outcomes from source protection plan policies include an increased awareness of beach monitoring for areas wh tional swimming takes place. In addition, municipal work to improve infrastructure is prioritized to reduce threats in (i.e., combined sewer replacement and relocations of sanitary sewers outside of vulnerable areas where they may king water treatment plants).	vulnerable
