

NATIVE PLANT SUPPLIERS

Benefits of Locally Adapted Plants!

NIAGARA PENINSULA
CONSERVATION
AUTHORITY

Native Plants have evolved naturally over the years, changing their physical features and biology based on geological conditions.

Plants from seed sources closest to your site will survive best, having already adapted to local soil and climate. Native plants do not require extra watering and thrive without the application of pesticides and fertilizers.

- 1) For increased plant survival, ask for plants/seed with origin from EcoDistrict 37 (7E-3 and 7E5)
- 2) Order plants by scientific name to ensure native species.
- 3) Ensure plants are not endangered or threatened. These plants would require specified locations and conditions.
- 4) Check the NPCA Native Plant Guide for Native Niagara Plant Species

Download our Native Plant Guide at npca.ca/native-plant-guide

What you plant matters. Native plants support a variety of life and provide a wide range of benefits to our communities.

habitat for wildlife

climate-smart

pollinators

DO YOU LIVE IN THE ZONE?

The Carolinian zone is home to more at-risk plants and animals than anywhere else in Canada.

Plants with the **In the Zone** label are native, locally grown, ethically sourced and provide habitat for native species.

Let nature be your guide. Join **In the Zone** to get free garden guides, easy-grow plant lists, expert advice and more.
