

Ancillary Information Map 4: Social Political Constraints and Costs

Explanatory Note:
 This map shows the underlying 'cost' values and constraint status of a hexagon in the baseline and most learning scenarios that influence the model selection process. Hexagons in shades of red are more costly for the model to consider as part of a solution and correlate to the presence of multiple potential human use influences. The dark green areas indicate hexagons locked in to the output solutions, while the black indicate areas locked out from consideration to contribution to system wide objectives.
